⚡ H2 Project Ranking Engine

A Streamlit web app to evaluate and rank hydrogen projects based on viability, readiness, storage requirement, and strategic fit.

🌐 Live App

> After deploying, paste your Streamlit Cloud URL here.

📁 Project Structure

```
hydrogen-project-scorer/
├── app.py              ← Main Streamlit app
├── requirements.txt     ← Python dependencies
└── README.md
```

🚀 How to Deploy (Free, No Coding Needed)

Step 1 — Create a GitHub Account

Go to github.com and sign up (free).

Step 2 — Create a New Repository

1. Click **New** (green button) → name it `hydrogen-project-scorer`
2. Set it to **Public**
3. Click **Create repository**

Step 3 — Upload the Files

1. Click **uploading an existing file**
2. Drag and drop `app.py` and `requirements.txt`
3. Click **Commit changes**

Step 4 — Deploy on Streamlit Cloud

1. Go to share.streamlit.io
2. Sign in with your GitHub account
3. Click **New app**
4. Choose your repository → branch: `main` → file: `app.py`

5. Click **Deploy!**

> Your app will be live at a URL like: `https://your-username-hydrogen-project-scorer-app-xxxx.streamlit.app`
> Share that link with anyone — no installation needed!

Scoring Logic

The app scores projects across **4 categories** (max 20 points total):

Category	Max Points	What it measures
Storage Required	5	How much H2 storage is actually needed
Viability	6	Commercial and regulatory readiness
Readiness	5	Technical and contractual maturity
Strategic Fit	4	Developer profile and innovation openness

Rating Bands

Rating	Score	Meaning
A	≥ 80%	Very Strong Fit — high priority
B	60–79%	Promising — engage and monitor
C	40–59%	Moderate — low priority for now
D	< 40%	Weak Fit — significant gaps

Run Locally (Optional)

```
pip install streamlit pandas openpyxl
streamlit run app.py
```
